## Upjohn Institute New Hires Quality Index for May 2019 up 0.7 percent from last year

KALAMAZOO, Mich.— In May 2019, the Upjohn Institute New Hires Quality Index shows inflation-adjusted hourly earnings power of individuals starting a new job rose 0.7 percent from a year prior, rising from \$16.54 to \$16.66. After rising rapidly over the course of 2018 and the beginning of 2019, the NHQI has slowed, with little net movement over the past three months. Nonetheless, hourly earnings power of new hires has risen 6.2 percent since 2005, according to the index.

The index and accompanying [interactive database](#) and [report](#), developed by Upjohn Institute economist Brad Hershbein, fill a key gap in the measurement of hiring activity. The NHQI provides monthly updates on the volume and occupation-based wages of newly hired workers, and is available for different groups based on sex, age, education, and other characteristics.

**New Hires Hourly Wage Index: All**

FOR EMPLOYMENT RESEARCH

These statistics and many more, as well as interactive charts and data downloads, can be found at the website for the Upjohn Institute New Hires Quality Index: [www.upjohn.org/nhqi](http://www.upjohn.org/nhqi).

The full report, including methodology, can be found here:  
[http://www.upjohn.org/nhqi/reports/NHQI\\_report.pdf](http://www.upjohn.org/nhqi/reports/NHQI_report.pdf).

All data will be regularly updated during approximately the first week of the second month following the reference of the data release month. For example, data for June 2019 will be released during the first week of August 2019. ## FAQ

### 1. What is the New Hires Quality Index?

The New Hires Quality Index (NHQI) is a consistent way of measuring the earnings power of people taking new jobs each month, allowing comparisons over time.

### 2. How is the Index constructed?

The Index is based on the occupations of newly hired workers as documented in the [Current Population Survey](#), the same source used to produce the national unemployment rate each month. Separate data on the hourly wages for each occupation from another government survey, [Occupational Employment Statistics](#), are connected to the newly hired workers in the Current Population Survey. These hourly wages are then statistically adjusted to account for differences in the demographic composition of new hires (sex, race and ethnicity, education, and age) before being averaged.

### 3. Does the Index measure actual, reported wages of newly hired workers?

No. Although the data used to create the Index do have some information on self-reported wages (or those reported by another household member), many economists consider these self-reported wages [increasingly unreliable](#), as a growing fraction of workers refuse to answer the wage questions, and the government's attempts to impute (make an "educated guess") for these workers are [problematic](#). Moreover, because relatively few workers are even asked the wage questions, and only a small subset of these are newly hired, use of the self-reported wage data would lead to very small samples.

The Index captures change in the wages of new hires due to both changes in the mix of occupations hired and the demographic characteristics of individuals taking new jobs. It will not capture change in the wages of new hires due to other factors, such as individual aptitude, geography, or employer characteristics.

A comparison of the Index with a series derived from the actual self-reported wages in the Current Population Survey can be found in the [technical report](#). An analysis of self-reported wages can also be found in the [July 2018 press release](#).

### 4. Does the NHQI count self-employed workers?

No, the NHQI excludes self-employment or people who work for themselves.

### 5. How often is the NHQI updated?

Every month, with the release by the Census Bureau of the Current Population Survey microdata. Updates will be posted on the [NHQI website](#) during the first week of the month, covering data from two months ago. Data are currently available from January 2001 through May 2019. To receive updates through email or social media, [visit the signup page](#).

### 6. What data are available on the NHQI website?

The [NHQI website](#) contains monthly data for all components of the NHQI. The four main components are: the hourly wage index, the hiring volume index, the wage bill index (the product of hourly wages and hiring volume), and the hires per capita index. Each component is available in its actual level or normalized to the base year 2005. In addition to providing data for all new workers, the NHQI exists for men, women, different age groups, different education groups, different races/ethnicities, different industry sectors, different regions, native and foreign-born, full- and part-time workers, and different types of new hires (the newly employed and employer changers). All data can be charted interactively or downloaded for separate analysis.
